

# The Elite System

## Upgrade Your V-Packing to the Industry's Most Advanced Technology

Forging plants driven to extend uptime and reliability can upgrade to System Seals' Elite System V-Packing Technology – a highly engineered solution customized to each individual press. Application engineers design custom V-Packings that incorporate one or more polyurethane seals and an extrusion-resistant female adapter along with traditional elastomer packings.

The added polyurethane resists scored surfaces from older rams, while allowing the elastomer packings to remain more firmly intact and perform significantly longer. System Seals' Elite System typically doubles the life of standard V-Packings and is the only solution of its kind on the market today. For large presses on a monthly replacement schedule, that equates to about \$6 million per year in gained productivity.

### CAPITAL PROJECTS CONSULTING

System Seals provides a comprehensive consulting service at no charge to forging plants during capital projects and equipment rebuilds. These are ideal times to design custom V-Packing that optimizes your uptime and reliability.

System Seals creates engineering drawings for the piston and gland and will analyze all operating conditions specific to each press, including speed, pressures and fluid compatibility. Seal failure analysis is also available to pinpoint areas needing improvement.

More options available.

## Traditional NBR & Fabric V-Packing

### Fastest V-Packing Delivery in the Industry

*Competitively priced seals are always in stock and delivered worldwide*

System Seals now stocks one of the largest inventories of NBR and Fabric V-Packing seals in the industry, allowing just-in-time shipments to nearly any location in the world. In North America, seals are often shipped in one or two days to ensure maximum uptime for our customers.

System Seals has built its reputation on high-performance products and industry leading shipments. Now with an extensive inventory of V-Packing on hand, as well as other large- diameter seals, our service has elevated to an unbeatable level. Call today and reduce your downtime tomorrow.

### 24/7 EMERGENCY ORDERS

When something goes wrong, lost production costs are crippling. This is why System Seals maintains a 24/7 emergency hotline that triggers an immediate internal process to package and ship the products you need now. This includes weekends, holidays and nights. Your lost production costs don't take a break, why should we? Call (216) 220-1800, anytime.

### FREE TECHNICAL SERVICE PACKAGE

Every V-packing order includes our Technical Service Package from System Seals' renowned Engineering Center. This free comprehensive service includes:

- On-site installation support
- Technical training
- Trouble shooting
- Seal failure analysis
- 24/7 emergency support
